

SOFTWARE RELEASE NOTES

MCS-CONNECT
Version 14.00M
07/31/2013

Updates from previous versions:

New Features:

1. Editing the way the hide/show column in the RO, AO, SI grids functions. The selected rows will now remain selected when the rows are shown after hiding. Right clicking the column header will now clear all selected rows. Also added Menu Items under the "View" menu to clear the check-box columns. Moved the Show spare rows Menu Item to the "View" Menu.

Bug Fixes:

1. In User Defined AO Control Linear V11 the Max Operand control type combo box was being improperly initialized with the wrong index. RESOLUTION - Getting the correct index from memory instead of using the currently selected combo box member.
2. In the MicroMag code the Heat and Reheat grid is currently only shown if specific setpoints are active. Adding another check which determines if MicroMag is in Supervisor forced mode and staging. If either is true Connect displays the grid.
3. Changed the label on the "Transmit SW" button to "Load Software" as this is the typical verbiage used by techs and developers to discuss this activity.
