

SOFTWARE RELEASE NOTES

MCS-CONNECT
Version 9.03J
07/24/2012

Updates from previous versions:

New Features:

1. Adding "Clock" to all User Defined Operand Lists.
2. Adding new RTU options to User Defined RO Control UI which will give user access to RTU Unit and Heating values as Operands.
3. New alarm - #66 Lost IO Comp.

Bug Fixes:

1. Checked for usage of Display field of setpoint and replaced it to get rid of signed byte bug. Made this change in all code to ensure consistency.
2. In V11 code I removed the Min Run Time column from the RO Grid in all config types except RTU.
3. Reworking RTU Heat tables in Status Grid to make sure the correct table is displayed depending on settings in the config.
4. Changed the way the print popup is displayed. Now hiding the initial popup when the file chooser is displayed and making it visible if no file/ invalid file is selected in the file chooser. Also centered the initial grid selection popup.
5. Editing the User Defined RO Control UI to add new options to the Pulse Panel allowing the user to select operands to use for pulsing values.
6. Moving the Setpoint Grid's "Type" column to the last column in the grid for all V11 and V12 config types.
7. Ensuring that the "EXV Start(when lead)" option in the FLA Cell Editor is a 1 decimal number.
