

# SOFTWARE RELEASE NOTES

---

MCS-CONNECT  
Version 9.03T  
10/05/2012

## Updates from previous versions:

### New Features:

1. Added new fields to Target Control Memory and new fields in the V12 Cooling and Heating grids.

### Bug Fixes:

1. Changing the Graph Setup User Interface to include states from the Graph History.
2. Changing the popup created when a user selects a new network interface. Removed the "Local", "Remote" and "Both" buttons and added a simple "OK" button. Also changed the label.
3. Commented out a line of code that was changing the default look and feel of all popups. This will bring back the consistency of the look and feel of all Frames and Dialogs.
4. Converting Micro Mag states with "AZ", "BZ and "IZ" to "Above Zone", "Below zone" and "In Zone".
5. Sensors were displaying incorrect types due to a bug that added erroneous "DEW Point" values to sensor type array. Resolution - removed erroneous values.
