

MCS Total Solutions for all your HVAC/R Control Needs

30HXC WATERCOOLED-12 CONTROLS UPGRADE

This brochure describes a standard upgrade package for the 30HXC Chiller.

Each Control upgrade installation is unique. It may be necessary to add additional options to the standard upgrade as described in this brochure.

Fill out the brief questionnaire in the back of this brochure and forward to your sales representative for an estimate.

30HXC Typical Upgrade

Reason for Upgrades:

- Failing linear floats in the economizer
- Continuous shut down trips
- Existing controls were obsolete
- Excessive man hours spent on site visits

- Removed existing obsolete controls
- Installed MCS-Magnum Controls
- Replaced old canister style economizer with a new plate-frame style economizer.
- Replace proprietary EXVs with standard Sporlan EXVs
- Connected compressor motor temperature sensors to MCS-Magnum Controller
- Customer added additional fan contractors to improve Discharge PSI control.

Results:

Obsolete controls were replaced with the MCS - Magnum Controller. This provided the customer with a control platform that is not built with a pre-planned obsolescence.

The MCS Controls will allow for future upgrades and operational changes that can be made through updated software. Previously released MCS hardware remains supported with current and future products.

MCS MAGNUM DOOR-12

Part # MCS-MAGNUM-DOOR-12

Description

The MCS-MAGNUM is a durable microprocessor based controller designed for the hostile environments in the HVAC/R industry. It is designed to be the primary manager of the package it is controlling.

The Magnum provides flexibility with setpoints and control options that can be selected prior to commissioning a system or when the unit is live and functioning. Displays, alarms and other interfaces are accomplished in a clear and simple language that informs the user as to the status of the controller.

The MCS-MAGNUM-DOOR-12 consists of a master control board along with a keypad and display. Complementing the Magnum micro controller are the MCS-RO-BASE, MCS-RO-EXT, MCS-SI-BASE and a MCS-SI-EXT expansion boards. Power is supplied by a 90W Single Output Power Supply.

Communication with these units occurs at 38,400 baud over the MCS-I/O port, which is dedicated to this purpose.

A complete software support package is available for your PC, allowing for system configuration, dynamic on-line display screens, remote communication, graphing and more.

Controller

Dimensions	12.0″w, 8.0″h, 2.0″d
Mounting Holes	Mounts on a backplane utilizing
-	eight through-hole studs
Operating Temperature	40°F to +158°F (-40°C to +70°C)
Operating Humidity	0-95% Non-Condensing
Storage Temperature	40°F to +158°F (-40°C to +70°C)
	Zilog eZ80 Acclaim! @ 50mhz
Sensor Inputs (SI)	12 inputs 0-5vdc (10-bit A/D)
Digital Inputs	4 inputs 0 or 5vdc only
	10 outputs 6.3amps @ 230vac
Analog Outputs (AO)	4 outputs 0-10vdc
Printed Circuit Board	Six layer with separate power
	and ground planes
Input Power (Standard)	+12vdc power in board from
	88-264vac switching 100W power supply
	77°F (25°C) ambient, 20VA max
MCS-I/O Comm Port	
RS-485 Comm Port	
Ethernet	
Real Time Clock	
Power Detection	Automatic power fail reset

10 0"... 0 0"h 0 0"d

Keypad/LCD NEMA rated Type 1

Display	
	monochrome graphics LCD with
	2.8" diagonal viewing area
Color	. White characters on a blue
	background (Reversible)
Keypad Size	.7.25"w x 8.50"h (8 mounting studs)
Keypad Layout	. 9 keys (3 function keys)
Connection	. 6 conductor shielded cable
	(max length of cable is 10 feet)
RS-485 Comm Port	
	4°F to +158°F (-20°C to +70°C)
Operating Humidity	,
Storage Temperature	-22°F to +185°F (-30°C to +85°C)

MCS-12V-90W-B

90W 12VDC Enclosed Switching Power Supply

Input Voltage: 88 VAC to 264 VAC
Output Voltage: 12 VDC @ 7.5 Amps
Input Current: 3 A / 115 AC - 1.6 A / 230 AC

Output Rated Current: 7.5A

Size: 2.76" x 3.54" x 2.14 (W*H*D (70*90*54.5mm)

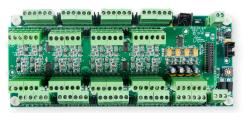

MCS-SI-BASE

The MCS-SI-BASE provides a flexible and cost effective way to allow sensor input and analog output expansion for the MCS MAGNUM. Each MCS-SI-BASE has a stand-alone microprocessor which communicates with the MCS MAGNUM over the MCS-I/O port at 38,400 baud. All data is check summed with auto error cor-

rection. Because communication is over a RS-485 long distance two-wire differential network transmission system, the MCS-SI-BASE may be located up to 5,000 feet away.

MCS-SI-BASE board can be powered by a 12VDC regulated power supply and has a automatic power fail reset system.

MCS-SI-EXT mounted to MCS-SI-BASE

MCS-SI-EXT

The MCS-SI-EXT provides a flexible and cost effective way to allow sensor input and analog output expansion for the MCS MAGNUM.

Each MCS-SI-EXT can be paired with a MCS-SI-BASE to double the number of inputs and outputs. Each

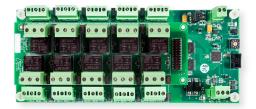

MCS-SI-EXT board is powered by the MCS-SI-BASE board once it is stacked on top.

MCS-RO-BASE

The MCS-RO-BASE provides a flexible and cost effective way to allow relay output expansion for the MCS-MAGNUM. Each MCS-RO-BASE has a stand-alone microprocessor which communicates with a Magnum/Micromag over the MCS-I/O port at 38,400 baud. All data is check summed with auto error correction.

Because the communication is over a RS-485 long distance two-wire differential network transmission system, the MCS-RO-BASE may be located up to 5,000 feet away. The MCS-RO-BASE board is powered by a 12VDC regulated power supply.

MCS-RO-EXT mounted to MCS-RO-BASE

MCS-RO-EXT

The MCS-RO-EXT provides a flexible and cost effective way to allow relay output expansion for the MCS MAGNUM.

Each MCS-RO-EXT can be paired with a MCS-RO-BASE to double the number of outputs. MCS-RO-EXT board is powered by the MCS-RO-BASE board once it is stacked on top.

MCS-PRESSURE TRANSDUCERS

The **MCS Pressure Transducers** are one of the most economical and durable options on the market for dealing with high-pressure industrial applications.

In addition to being CE and UL approved, MCS transducers are capable of surviving high vibration. They include a cavity built out of solid 17-4 PH stainless steel ¼" SAE Female Flare fitting & Schrader valve; 7/16-20 UNF pipe thread which creates a leak-proof, all metal sealed system that makes the transducers ideal for use with rugged HVAC environments.

MCS-T-100 Temp Sensor

An extremely fast acting temperature sensor built for demanding environments. It is ideal for high moisture locations with continuous freeze and thaw cycles. The sensor is potted with a thermally conductive RTV Cure Silicon Adhesive to guarantee durability and response. Its high accuracy allows for interchangeability in the field. The large resistance range allows the use of over 1000' of cable with no noticeable effect. The MCS-T100 sensor has the ability to move from 32°F to 212°F in approximately 10 to 15 seconds.

MCS-Wells/Tubes

The MCS-WELL was designed to be used with the MCS-T100 temperature sensor, although it has other applications. It is used in the 30HXC series chillers in the chilled water and condenser water lines. It comes prefilled with heat conductive compound to aid in temperature to the sensor.

The **MCS-TUBE** can be epoxied to a discharge or suction line on the 30HXC series chillers in order to obtain temperature readings without the use of a well. It was designed to be used with the MCS-T100 temperature sensor and comes pre-filled with heat conductive compound to aid in transferring temperature to the sensor.

MCS-EPOXY

- · Pre measured resins and hardeners in one tube
- Easy to use bonds, seals, plugs, molds and rebuilds
- No special tools needed
- Can even harden under water

MCS-CARRIER 5K-ADAPTER

The Carrier 30 HXC chiller comes equipped with embedded 5K thermistors in the motor. There are two (2) thermistors factory installed in each compressor. There are three (3) terminals for the thermistors. (S1, S2 & C) Motor temperature is measured by leads connected to one of the S terminals and the C terminal.

MCS-CT300

The **MCS-CT300** current sensor monitors current flowing to electrical equipment. The magnitude of the current is converted to a linear 0 to 5vdc output signal which can be read as a standard analog input signal. The signal is used by MCS micro controllers for the following:

- 1. For slide valve control on screw machines
- 2. For high amp motor overload protection
- 3. For verification of device on / off

MCS-VOLTAGE-3PH

The MCS-VOLTAGE-3PH measures AC voltage between 200-600 AC. It is designed to monitor the voltage of each phase of the main input power to the unit. The MCS-VOLTAGE-3PH sensor provides three separate DC voltage outputs that correspond to the AC voltage it is measuring.

MCS-PHASE-B

The MCS-PHASE-B is a programmable 3-phase line voltage monitor, high temperature LCD display, easy setup and clear diagnostic readout of system faults. The MCS-PHASE-B was specifically designed to protect motors and other 3-phase loads from premature failure and damage due to common voltage faults such as unbalance, over/under voltage, phase loss, reversal, incorrect sequencing and rapid short cycling.

MCS-USB-RS485

The **MCS-USB-RS485** is a USB to RS485 cable that provides a fast simple way to connect a **MCS-MAGNUM** to a Laptop or PC.

The MCS-USB-RS485 cable contains a small internal electronic circuit board, which converts USB to RS485 with LED indicators for transmit (TX=Red) and receive (RX=Green).

MCS-RS-485 EXTENDER

For those installations requiring an RS-485 port to be accessible without the necessity of opening the Control Cabinet door, MCS offers the part shown above.

The MCS-RS-485-EXTENDER mounting plate can mount on the outside of your enclosure and plugs into the RS-485 port on the back of the keypad.

A removable three-position terminal block is provided for easy wiring. to the keypad.

MCS-EXV-DRIVER

The MCS-EXV-DRIVER is used for the positioning and control of Sporlan, Alco, Carel, and Danfoss bipolar expansion valves using an analog input of 0-10 VDC (0 VDC = 0% valve opening, 10 VDC = 100% valve opening). The MCS-EXV-DRIVER also supports overdriving on full opened and full closed voltage signals. The display decimal notifies when overdriving by blinking.

MCS-SEHI/SERI

The MCS-SEHI/SERI are Electronically Operated Step motor flow control valves, intended for the precise control of liquid refrigerant flow. Synchronized signals to the motor provide discrete angular movement, which translates into precise linear positioning of the valve piston. Valve pistons and ports are uniquely characterized, providing improved flow resolution and performance. The MCS-SEHI/SERI valves are easily interfaced with MCS microprocessor based controllers.

30HXC Typical Options

BMS GATEWAY

The MCS-BMS-GATEWAY is a microprocessor based communication device that provides translation from Bacnet IP, Bacnet MSTP, Modbus IP, Lontalk, or Johnson N2 communication interface. Information that can be transmitted includes the status of control points, alarm information, digital inputs, analog inputs or setpoints.

The MCS-BMS-GATEWAY protocol is field selectable by setting jumper on the device. Using **MCS-CONFIG** and the CONFIG files for the MCS-MAGNUM, you can automatically create the CSV files that is required by the MCS-BMS-GATEWAY.

30HXC Typical Point List

Relay Outputs

#	Output Name	Туре	Description			
M-1	Comp 1AM	Step w/ EXV	Compressor 1 main relay for star-delta			
M-2	Comp 1AD	Standard	Compressor 1 transition relay for star-delta			
M-3	Load 1A-1	Step w/ EXV	Compressor 1 loaded to 50%			
M-4	Load 1A-2	Step w/ EXV	Compressor 1 loaded to 100%			
M-5	Oil Pump 1A	Standard	Oil pump: Turn ON or OFF circuit A			
M-6	HotGas 1A	Standard	Hot gas bypass: Turn ON or OFF circuit A			
M-7	LiqInj 1A	Standard	Liquid injection motor cooling compressor 1			
M-8	Oil Sol 1A	User Logic	Opens oil line to the compressor circuit A			
M-9	Econ 1A	User Logic	Opens solenoid for economizer circuit A			
M-10	Warning	Standard	Warning Light: unit is in a safety condition prior to a safety shutdown.			
1-1	Comp 2BM	Step w/ EXV	Compressor 2 main relay for star-delta			
1-2	Comp 2BD	Standard	Compressor 2 transition relay for star-delta			
1-3	Load 2B-1	Step w/ EXV	Compressor 2 loaded to 50%			
1-4	Load 2B-2	Step w/ EXV	Compressor 2 loaded to 100%			
1-5	Oil Pump 2B	Standard	Oil pump: Turn ON or OFF circuit B			
1-6	HotGas 2B	Standard	Hot gas bypass: Turn ON or OFF circuit B			
1-7	LiqInj 2B	Standard	Liquid injection motor cooling compressor 2			
1-8	Oil Sol 2B	User Logic	Opens oil line to the compressor circuit B			
1-9	Econ 2B	User Logic	Opens solenoid for economizer circuit 2			
1-10	Alarm	Standard	Alarm Light: unit is in a safety shutdown			
2-1	Comp 3AM	Step w/ EXV	Compressor 3 main relay for star-delta			
2-2	Comp 3AD	Standard	Compressor 3 transition relay for star-delta			
2-3	Load 3A-1	Step w/ EXV	Compressor 3 loaded to 50%			
2-4	Load 3A-2	Step w/ EXV	Compressor 3 loaded to 100%			
2-5	Oil Pump 3A	Standard	Oil pump: Turn ON or OFF circuit A			
2-6	LiqInj 3A	Standard	Liquid injection motor cooling compressor 3			
2-7	Oil Sol 3A	User Logic	Opens oil line to the compressor circuit A			
2-8	Econ 3A	User Logic	Opens solenoid for economizer circuit A			
2-9	Spare 2-9	Spare	Relay output not used
