Product Update

Announcing the New MCS-RO10

Providing HVAC/R Control Solutions Worldwide

Micro Control Systems is proud to announced the release of an exciting new product, the MCS-RO10. The MCS-RO10 is a ten relay output expansion board designed to work with both Magnums and MCS-8's. It was designed to be a replacement for the current MCS-RO8 board and has the same physical size and footprint. However, it has many advantages over the MCS-RO8. In addition to providing ten relay outputs instead of eight, the new MCS-RO10 includes some of the features found on our newer Magnums, including a field selectable voltage selector switch for 115 or 230vac operation, new style power input fuse, new heavier duty relays and the newer green Euro-style Tyco removable connector blocks.

**And what about pricing?
The list price is about 15% lower than the MCS-RO8 !**

Although MCS-8's and current Magnums can only utilize eight of the ten relays on the MCS-RO10, work is nearing completion on new software (version 8) for the Magnum that will enable it to make full use of all ten relay outputs.

Because the MCS-RO10 has many advantages over the MCS-RO8 and can replace it, the MCS-RO8 will no longer be manufactured and will no longer be shipped once stock has been depleted. However, a limited supply of remanufactured MCS-RO8 boards will still be available for field replacement of existing boards.
