Sept. 1, 2015

For Immediate Release

We have noticed a pricing error in our latest price book for the MCS-T100-40.

The pricing, effective September 1st will roll back to **\$40.00**
each as opposed to \$43.00 ea.

The **MCS-T100** is an extremely fast acting temperature sensor built for demanding environments. It is ideal for high moisture locations with continuous freeze and thaw cycles. The sensor is potted with a thermally conductive RTV Cure Silicon Adhesive to guarantee durability and response. Its high accuracy allows for interchangeability in the field. The large resistance range allows the use of over 1000' of cable with no noticeable effect. By placing a 100,000 ohm resistor between signal and ground the sensor may be used in a three wire input mode. The table below provides a cross reference between °F /°C, ohms, and vdc at a sensor input pin (S1) of a MCS micro controller.

**MCS-T100-40
Temperature Sensor**

If you would like to place an order at this price, please do not hesitate to contact us at: **239-694-0089**.

Our friendly staff is available to process your request.

Thank you for being a valued customer of Micro Control Systems.
