

Providing HVAC/R Control Solutions Worldwide

# For Immediate Release

Product Update

APRIL 2015

Micro Control Systems has modified the communication ports for the MCS-MAGNUM.

In order to simplify and allow the Keypad to be sealed (Nema4 mounting) the RS-232 port on the Keypad has been removed and replaced with a RS-485 port on the back side of the Keypad.

A PC can now be connected to the RS-485 port on the back side of the Keypad or RS-485 port on the MCS-MAGNUM board utilizing MCS-USB-RS485 cable.

Options are available for those still needing communication utilizing RS-232 port.
