

SOFTWARE RELEASE NOTES

MCS-CONFIG Version 14.00G 06/27/2013

Updates from previous versions:

Bug Fixes:

1. In ALL config types V14 on the SI screen under the display text column when the display text drop down is clicked and a display text is selected and the user clicks off of the row the text that is displayed is changed to the one that is directly above the index that was selected. Resolution: In the close up event of the drop down there is a test for the config version and there should not be a test as this screen is only loaded if the version is V14, removing the test.
2. In HVAC & RTU config types V11 and V14 on the MAG INFO screen when a radio option is set to Not Used or No then all of the points in the panel were cleared to Not Used which is causing the software in the magnum to not work correctly. Resolution: Comment out the source code that clears the memory locations.
