

# SOFTWARE RELEASE NOTES

---

## MCS-CONFIG Version 14.000 08/22/2013

### Updates from previous versions:

#### New Features:

1. In ALL config types V11, V12, and V14 adding a new sensor type to the list of SIs called STAT\_CO2. Only adding this sensor type to the list for MicroMag config types.
2. In MicroMag config types V12 adding in three sensor display types to the list of selectable sensor types - STAT1F, STAT1H, and STAT1SY.

#### Bug Fixes:

1. In ALL config types V11 and V14 on the MAGNUM info screens changing the # of Circuits drop down list caption to say # of Compressors.
2. In ALL config types V11 on the top left corner of the main screen when the File button is clicked the option to convert a V11 cfg to a V14 cfg is changing the wording.
3. In MicroMag config types V12 on the Setup Screen on the BMS Config panel changing the caption to RS485 Config-Loss of BMS Communication.
4. In ALL config types V11 and V14 on the BMS Points screen when the csv files are created the BACnet MSTP Config file that is created contains an error in it when a setpoint is active and set to be a writable setpoint. The value does not show up on startup, only when the values are refreshed. So now there will be a readable and writable copy of each setpoint that is checked as writable and set to active on the client side and the server side.
