

SOFTWARE RELEASE NOTES

MCS-CONFIG Version 17.00I 01/05/2015

Updates from previous versions:

New Features:

1. In ALL config types V17 on the SI, RO, and AO user logic popups when the first operand selected is Compressor #1 thru Compressor #20 adding three new items to the end of the sublist after the #29 Exv S-Ht Roc: #30 "Subcooler EXV State", #31 "Subcooler EXV Superheat", #32 "Subcooler EXV Superheat ROC".
2. In ALL config types on the AO Info screen under the Control Type column adding a new type called Modbus Write that will be saved in memory as a number 9. When this new type is selected from the drop down list an AO Modbus Write popup will be displayed and will look similar to the Linear Ctrl type popup with a few differences: The Operand#1 caption will change to Value with the same drop down list boxes. Adding a YES/NO condition that will allow the user to choose whether or not they will be using Min and Max values, if no the Min and Max panels will be hidden. Adding a Display Type drop down just like on the RO and SI User Logic wizards. ** The print for this new feature is not finished yet. **

Bug Fixes:

1. In ALL config types V17 on the RO user logic popup when the form loads the CPM operand drop down list boxes are not hidden. Resolution: Add the source code that handles the visible property for those boxes.
