

SOFTWARE RELEASE NOTES

MCS-CONFIG Version 17.00Z 11/3/2015

Updates from previous versions:

New Features:

1. In ALL config types on the print popup, adding a checkbox on the top right that will only check the boxes that are used most often when creating jobs to send out to customers.
2. In ALL MICROMAG config types V12-RTU on the MICRO MAG info screen under the Cooling Info section on the Compressors panel, adding a panel called Increase Reheat Capacity When Below Target? that will hold a YES/NO radio button condition.

Bug Fixes:

1. In ALL config types new file save feature is appending "_Rev_" plus the system form field Rev# to the end of the file name every time the file is saved. Resolution: The test that was looking for the "_Rev_" text was incorrect, corrected it.
2. In ALL config types V12 and V17 when the MAG INFO screen is opened on computers with external graphics cards installed, a windows error #380 occurs. Resolution: The small change of the vertical scroll was being assigned negative values.
