

SOFTWARE RELEASE NOTES

MCS-CONFIG Version 18.00L 9/9/2016

Updates from previous versions:

New Features:

1. In ALL config types ALL versions of MCS-Config structures added to the File menu and as a keyboard shortcut(CTRL+S) the ability to save what is currently in RAM for the currently opened file. This only overwrites the current file that was opened and only the currently loaded structures. To perform a full save the Save As(CTRL+F) menu icon or menu item should be clicked or the keyboard shortcut should be used.
2. In ALL MICROMAG config types V18 on the Setup screen under the RS485 Communication #2 section adding the memory location for the Protocol Type drop down list box. Adding BACnet device id bytes for the second BACnet device id on the RS485 Communication #2 panel.
3. In HVAC, CENT, MHRC, PAO, REFR, and RTU config types V17 MAG INFO screen under the Refrigerant Type drop down list box adding a new refrigerant type called 421A.
4. In HVAC, CENT, MHRC, PAO, REFR, and RTU config types V17 on the MAG INFO screen under the Condenser Info section on the Condenser Type panel adding a new Condenser Type to the drop down list called Modulating Shared which will mimic the functionality of the Modulating Individual type in MCS-Config.

Bug Fixes:

1. In ALL MicroMag config types V12 CHILLER on the SI Info screen under the Name column the wrong name list is being loaded on open. Resolution: Change the test in the source code to load the correct array of names.
2. In ALL config types V11 to V14 conversion on the Setup screen on the System Graphic Info panel when the file is converted and the file name does not contain "html" in it the memory location is cleared. Resolution: Add the "xml" text into the test.
3. In ALL config types V17 on the RO Info screen under the Type column when certain types of comps are selected some of the other columns values are displayed only sometimes. Resolution: Add the source code to update the columns when the drop down closes.
