

SOFTWARE RELEASE NOTES

MCS-CONFIG Version 18.00M 10/5/2016

Updates from previous versions:

New Features:

1. In ALL MICROMAG config types V12 creating a link under the File menu button that will allow the user to convert a V12 MicroMag config file into a V18 MicroMag config file.
2. In ALL config types V17 on the Circuit Base screen to the right of the Condenser grid now displaying a Fast SSH Configuration Settings panel when any of the circuits have Fast SSH selected in the Evaporator EXV Control column.

Bug Fixes:

1. In REFR config types V17 on the RO info screen the IGV Offset %, VFD Start % and the VFD Start % Time are all not displayed. Resolution: Display the columns if the type is REFR.
2. In ALL MicroMag config types V18 Chiller & RTU on the Setpoint Info grid setpoints 87 and 88 are being changed from SPARE STPT to COMPR 5 FLA and COMPR 6 FLA.
3. In ALL MicroMag config types V18 RTU on the MICRO MAG info screen under the General section on the Supervisory Controls when the Supervisory Mode selected is Forced Staging the Stage 4 and 5 Enable switch are missing. Resolution: Add the panels, drop boxes, and source code to handle the 5th and 6th comps.
4. In ALL current forms the horizontal scroll was set incorrectly. Resolution: Adjusted the HScroll .max property to the max width of the form so the Horizontal scroll would go the width of the screen.
5. In ALL MicroMag config types V18 on the Setup screen on the Type of I/O boards panel the RO-6 and SI-8 will no longer be supported as I/O board option. Resolution: Remove the panel to select the I/O board and comment out all of the source code that tests for the board type's memory location and set the memory location to RO10-SI16-AO4 I/O boards.
6. In ALL LWC config types V17 some of the print values from the MAG LWC screen are incorrect when printing. Resolution: Add the source code to handle the correct memory locations.
