

MCS Release Note

Product Type: MCS-Config Software Revision: 19.01.27

Release Date: January 7, 2026

BETA Release 19.01.27 — Thursday, January 7, 2026 Log

Overall Summary

- This beta focuses on fixing BACnet device ID handling issues in the V19 setup screen (including a validation loop bug), and includes a UI patch to always display the demand limiting panel for CENT software types.

Bug Fixes:

- Fixes device ID validation loop bug in setup screen V19
- Renames functions to clarify their purpose and directly return device IDs, simplifying the code and resolving an infinite loop in the LostFocus validation flow caused by incorrect validation logic.

Patches:

- Always shows the demand limiting panel for Magnum V17 and NitroMag V19 CENT configs. Ensures the demand limiting panel is always visible by removing conditional logic that previously hid it based on compressor speed AO logic on the circuit base screen. Also comments out the related compressor speed flag determination logic.
