

MCS Release Note

Product Type: MCS-Config Software Revision: 19.01.44

Release Date: June 2, 2026

Summary:

- This release addresses display and data consistency issues in the User Logic and HVAC configuration forms.

Bug Fixes:

- Corrected an issue where device selection dropdowns in User Logic forms remained visible on screen after switching to an operand type that does not use those controls, causing a cluttered and confusing interface.
- Fixed a problem where dropdown selections in User Logic forms did not correctly save the chosen value, resulting in stale or incorrect data being retained.
- Resolved an issue where switching an operand type to Fixed Value did not reset the value field to zero, allowing leftover values from a previous selection to carry over unintentionally.
- Corrected the visibility of a panel in the HVAC form that was incorrectly hidden during form load and when changing options, ensuring it is now consistently displayed as expected.
