

SOFTWARE RELEASE NOTES

MCS-CONFIG Version 8.00V 06/13/2011

Updates from previous versions:

Bug Fixes:

1. TurboCor Compressors Only: Added a "Load Balance Valve" AO dropdown list box to the Compressor Info screen that will be visible only if a TurboCor compressor is selected. The Load Balance Valve column on the Circuit Base screen has been removed.
2. When the System button is clicked a file is created and saved as a bitmap in the folder that the config is loaded from. Added code to delete the file once the app or form is closed.
3. Changed the name and caption of the "TurboCor RPM" column to "Compressor RPM" in the Circuit SI screen.
4. On the setpoint grid and the SI grid changed all time values to capital (i.e. sec to SEC and min to MIN). Changed the caption properties for columns "Safety Down Time(min)" and "Window to Extend Safety Time(sec)" on the setpoint grid so the min and sec is not cut off. Also, modified the print page of the Setpoint Info so the 'min' and 'sec' are not cut off.
