

SOFTWARE RELEASE NOTES

MCS-CONFIG Version 8.00X 07/05/2011

Updates from previous versions:

New Features:

1. Added a new column labeled "Starting Speed RPM" to the RO grid that will be visible only when a TurboCor compressor type is chosen.
2. Added function to automatically remove the dashes within the RO grid if the user clicks in a cell. This corrected previous problem of MCS-Config not accepting the input value unless the dashes were deleted first.
3. Added a label in the Setup screen's "RS485 Communication" panel asking the user if they are using UPC on RS485.
4. Added a column in the Circuit Base screen titled "Start Speed AO" that will be visible only if the compressor type is a TurboCor.
5. Added the GPM type for the "User Logic", "SI Calculation Wizard", "ModBus Type", and "Select Display Type" drop down list boxes on the SI screen, and for the "Select Value: # decimals & print char" drop down list box on the Setpoint screen.

Bug Fixes:

1. Fixed following printing bug: When the selected printer is MS XPS document writer, Adobe PDF, or possibly any other print-to-file, then the common dialog box that is associated with the main form causes a printer error '482' if the user clicks on cancel or the top right corner red X twice
2. REFR Configs Only: On the setpoint screen setpoint #119 is highlighted in red for lockout when active and was changed to be #58.
3. Centrifugal Type Compressors Only: Changed the names "Load" and "Unload" to read "Open Vane" and "Closed Vane" respectively in the RO grid "Choose A Circuit" drop down. Also added "RO Valve Open" and "RO Valve Closed" to the list if the subcooler valve type is RO.
4. CENT Software Configurations only: Corrected the MAG CENT V8 screen header to say "Magnum CENT V8 Information Screen" instead of "Magnum HVAC V8 Information Screen". Also corrected the printed Magnum Information screen the heading to read "MAG CENT Information" instead of "MAG CHL Information".
