

SOFTWARE RELEASE NOTES

MCS-CONFIG Version 8.10M 10/11/2011

Updates from previous versions:

Bug Fixes:

1. Changed the High and Low Sensor faults on the SI screen when the display type is a TurboCor Fault to read "Not Used" just like a digital sensor type.
2. On the SI screen using a centrifugal config the user is saving the config after disabling all sensor faults with the column heading click button. When the user reloads the same config after saving the sensor faults that were enabled are enabled again. Resolution: There was a test in the file write that puts the values into a different memory location if the display type is User Logic. I added code to save to both memory locations
