

RELEASE NOTES

MCS-CONFIG Version 9.04A 11/21/2012

Updates from previous versions:

New Features:

1. In RTU config types on the MAG RTU info screen under the ventilation section on the Return Fan panel adding two new SI drop down list boxes called Speed Target SI and Speed Control SI.

Bug Fixes:

1. In all config types on the BMS Points screen when the user clicks the Create MCS-BMS-GATEWAY CSV FILES button the csv file for BACnet MSTP is the only one that prints the writable SI and Setpoint points. Resolution: Add the SI and Setpoint writable points to LONTALK and Johnson N2.
2. In all config types on the BMS Points screen when the user clicks the Create MCS-BMS-GATEWAY CSV FILES button the csv file for LONTALK prints NVPO and SERVER as the Lon_Function and Function columns values on the SERVER side of the file. The correct Lon_Function and Function are NVUOIMX and Wrbx. Resolution: Modify the print values to the correct functions.
3. In MicroMag config types on the MicroMag Info screen under the general section removing the new panel called Mode Priority which is on the Control Mode On: panel at the bottom.
