

SOFTWARE RELEASE NOTES

MCS-CONNECT
Version 17.11.00
2/17/2016

Updates from previous versions:

New Features:

1. Added support for REFR unit header states in XML Graphics.

Bug Fixes:

1. Fixed an error in the new Alarm Severity column initialization that was causing MCS-Connect to stop responding.
2. In the Graphics based Graphs the user can now specify the color of each plot line and the background color of the Graph and the Graph grids.
3. Removed the subtraction of the minimum value tag from the calculation of the actual value of gauges in the GraphicXMLLoader to allow minimum values other than 0.
4. Changed the minor tick, major tick, section, area, and track data type from int to double in the GraphicXMLLoader to allow for decimal values.
5. On the touchscreen, stopping the History Pullback before it is complete is causing an error which is locking up MCS-Connect. This is caused by a call to dispose of a Progress bar that is already been disposed of. Moved the second call to the Event thread and only if the Progress bar is still visible.
