SOFTWARE RELEASE NOTES

MCS-CONNECT
Version 14.00I
06/28/2013

Updates from previous versions:

New Features:

1. Added EXV States into the data that is exposed to the Graphics screen. Gave it an id of "XV:circuit#".
2. Added registered function calls to Graphic HTML Loader as a framework to give the user the ability to change Sensor values from Graphics.
3. Added a registered function to Graphic HTML Loader to allow the user to do a lockout reset from a button in Graphics even though there is a menu item already in place.

Bug Fixes:

1. In Magnum V14 the alarms had not been updated to take into effect the expanded setpoints. RESOLUTION - Made the function in Magnum V14 Device match the V14 SW.
2. V14 configs were unable to display graphics causing MCS-Connect to lock up when attempting to load the embedded browser. This was due to MCS-Connect attempting to use the same split up path name as V11 uses. In V14 we consolidated it to be just one field in System Graphic V14 memory location. RESOLUTION - Made the routine to get the system graphic file name for V14 look at the correct class member like the MicroMag does.
