SOFTWARE RELEASE NOTES

MCS-CONNECT
Version 14.01J
03/27/2014

Updates from previous versions:
Bug Fixes:

1. Added the new Damper grids to the print to file for RTU SW v14.04 and later.

2. PT Chart was not working. The user could not select a different refrig type once the chart was open or use the value calculator. This was due to the value display table having 2 less rows than needed to display the value array causing an exception on initialization preventing the remaining functionality. RESOLUTION - I added 2 more columns to the table to allow the complete value array to load without causing an exception.
