SOFTWARE RELEASE NOTES

MCS-CONNECT
Version 15.00E
08/06/2014

Updates from previous versions:

New Features:

1. **CPM User Logic: Adding CPM structures to User Logic classes**

Bug Fixes:

1. **The RO grid was not showing up on the desktop for MicroMag config types. This was caused by a referencing error when attempting to refresh the grid. I was looking at the wrong button header for the hide/show column. RESOLUTION - Changed the reference to the correct instance of button header.**

2. **The Control On column in the status grid for V14 CENT SW is not updating when the SI represented there is hidden. This is due to the lack of a check for this config type when refreshing this Sensor regardless of its viewability. RESOLUTION - I added a check for this cfg type in my refresh loop to update this SI value all the time.**
