SOFTWARE RELEASE NOTES

MCS-CONNECT
Version 9.20G
03/22/2013

Updates from previous versions:
New Features:
1. Adding the hide/show column to the AO grid in both the V11 and V12 Device types
2. Added an icon to the hide/show column header to indicate its functionality.

Bug Fixes:

1. The check-box column used to hide/show ROs and SIs rows is currently hiding the selected rows. Management would like the selected rows to be shown and the unchecked rows to be hidden.(User selects the row(s) they want to view) RESOLUTION - I switched the logic that hides the rows to hide the unchecked rows instead of the checked ones.
2. The new hide/show column change caused the RO grid to not display user logic popup when the RO name column is clicked. This is due to the columns being moved 1 index to the right and not updating which columns are editable. RESOLUTION - Added column #2 to the list of editable columns in the RO grid.
