SOFTWARE RELEASE NOTES

MCS-CONNECT
Version 9.30F
04/25/2013

Updates from previous versions:
New Features:

1. Updated RTC eerom to latest version to match SW.
2. Added an option to the argument list run from the mystartup.bat file to allow users to enter an auth level that is automatically set when the touchscreen auto starts. This will be the 8th argument in the list and consists of the user adding either "Factory", "Supervisor", "Service" or "User" as the argument. If the user is not using prior arguments in the list an "x" may be substituted for the prior arguments.

Bug Fixes:

1. When attempting to load the Graph screen, a call to repaint the InfoTabbedPane in the Information Thread was not being done in the event dispatch thread and this sometimes caused an exception if the event dispatch thread was changing something on the screen at the same time. This exception was not caught and was causing MCS-Connect to stop responding and forcing the user to close MCS-Connect and restart. RESOLUTION - This call to repaint is no longer necessary due to the reworking of the Information Thread.
