

# SOFTWARE RELEASE NOTES

---

MCS-CONNECT  
Version 9.30G  
05/01/2013

## Updates from previous versions:

### New Features:

1. In the MicroMag Status Grids I added 2 new columns ("Temp Enable SI" and "Humid Enable SI") to the Unit status grid. I am figuring which sensor is used and displaying its "name = value" in the appropriate column.
2. Adding a velocity control table to the MicroMag status grid - Incomplete
3. Changed the keyword used for each auth level that allow user to auto authorize in the mystartup.bat file to something less obvious.
4. Removed most split panes from the Information Tabbed Pane. Tables/Panels are now placed in their own Internal Frames and shown together in an embedded desktop. The new frames can now be individually sized, relocated, minimized, maximized, closed and re-opened. Re-opening is done from a new "Window Manager" Menu in the Top Menu Bar. The "Reset/Clear" tab from the Tabbed status frame has been deprecated and all functionality for this frame also moved to a new "Reset/Clear" Menu in the Top Menu bar.
