

MCS Release Note

Product Type: MCS-Connect Software Revision: 19.01.19

Release Date: April 8, 2026

Release 19.01.19 - Wednesday, April 8, 2026 Log:

Summary:

- Release 19.01.19 adds Plant Manager device support to V19 systems and enhances the reliability of remote network discovery operations.

Enhancements:

- Adds support for Plant Manager (PMGR) devices numbered 1 through 15 with Modbus RTU connectivity and User Defined interface configuration.
- Implements Flow Lost alarm detection (alarm code 2071) for V19 devices to monitor CHW, CND, HRC, and HTW valve performance.
- Updates Modbus Slave network address handling in V19 service panels.
- Improves remote network scanning to gracefully handle unreachable networks and connectivity failures without halting the discovery process.
- Maintains accurate scan progress tracking across all network connectivity scenarios.
- Adds IPv4 address validation to broadcast address range logic.
- Refines Main UI scroll pane dimensions for improved component visibility.
