

SOFTWARE RELEASE NOTES

MCS-MAGNUM

Version 9.00L

09/26/2011

Updates from previous versions:

New Features:

1. Added logic to keep the last TurboCor compressor in the Pumpdown state for 15 seconds after the EXV goes OFF.

Bug Fixes:

1. Changed TurboCor compressor unloading logic. When Wanted Compressors is decreased then all running compressors will unload together until the one in Pumpdown goes OFF, then the remaining compressors will load back to the 90% of setpoint #30 "MAX FLA%". Before all compressors remaining on would go to 90% while the one compressor turning off would go to minimum %.
