### Description

The **MCS-MAGNUM** is a durable microprocessor based controller designed for the hostile environments in the HVAC/R industry. It is designed to be the primary manager of the package it is controlling. The Magnum provides flexibility with setpoints and control options that can be selected prior to commissioning a system or when the unit is live and functioning. Displays, alarms and other interfaces are accomplished in a clear and simple language that informs the user as to the status of the controller.

The **MCS-MAGNUM-DOOR** consists of a master control board along with a keypad and display. Complementing the Magnum micro controller are the **MCS-RO10** and **MCS-SI16-AO4** expansion boards. This allows for system expansion to a maximum of 112 inputs and 108 outputs. Communication with these units occurs at 38,400 baud over the MCS-I/O port, which is dedicated to this purpose.

A RS-485 port is also provided for communication with Building Mangement Systems (BMS). Other features include the integration of BACnet IP, Modbus IP and Modbus RTU into the MAGNUM. A **MCS-BMS-GATEWAY** is also available that allows communication via BACnet MSTP and LonWorks.

A complete software support package is available for your PC, allowing for system configuration, dynamic on-line display screens, remote communication, graphing and more.

MCS-MAGNUM-DOOR ships with MCS-MOUNT KIT which includes 8 #6 sheet metal screws, 5 Standoffs and 1 Lexan Cover.

An optional RS-232 port can be added to the back of the keypad. See photos to the right.
